

## CONTEC AND TRS SHARE A COMMON VISION

Sharing the same vision of implementing circularity within the rubber and tire manufacturing industry, we are happy to announce a partnership with Contec, promoting our products and technologies as well as joint research and development activities.

At Contec, we provide circular rubber and plastic solutions that deliver low-carbon-footprint products by recovering Carbon Black, oil, and steel from waste tires. We enable partners to decarbonise their supply chains and contribute to a sustainable future, where rubber recycled waste can be used as a feedstock instead of fossil fuels.

At Tyre Recycling Solutions, we build global solutions for the collection, processing and recycling of scrap tires through the development and implementation of innovative technologies and business processes. Our technology toolbox utilizes a unique water-jet milling process which can produce high-performance powder for use as raw materials in a variety of industrial rubber products and high value applications and compounds. We derive our revenues from equipment sales, licenses, sale of high-performance rubber powder under our globally trademarked brand name TyreXol™ as well as the sale of TPE-TyreXol compounds, made of (recycled) thermoplastic elastomers.
